When fever ($> 37,5^{\circ}\text{C}$) and symptoms continues or gets worse. Consult with call center.

Whatsapp 'Hi'
0600 123 456

Use a personal vehicle/ambulance and wear a facemask when visiting a health facility

Inform the Healthcare provider of a travel history and contact history with persons with respiratory symptoms

WHAT IS THE EFFECT OF POLLUTION ON THE ENVIRONMENT

- The growing population of the world and expanding economic development lead to environmental management problems.
- Nature has to make space for people's homes, farmlands and pastures.
- Great pressure is exerted on conservation areas.
- With industrial development environmental degradation and pollution may become obstacles for social and economic development.
- The result is that the supply of material goods increases but the quality of life deteriorates.

WHAT IS THE EFFECT OF AIR POLLUTION ON THE ENVIRONMENT

- Air pollution is caused mainly from burning fossil fuels like coal, diesel and petrol in the industrial and transport sectors, and wood for domestic use. South Africa has a major problem with air pollution. Air pollution from our coal burning power stations contributes to acid rain.

WHAT IS THE EFFECT OF WATER POLLUTION ON THE ENVIRONMENT

- Water pollution results from the discharge of untreated agricultural, industrial and domestic waste into rivers and dams. Polluted water is harmful to humans and plants, aquatic life and animals.

WHAT IS THE EFFECT OF LAND POLLUTION ON THE ENVIRONMENT

Land pollution is caused by dumping refuse and builder's rubble, poor agricultural practices and mining. Industrial refuse includes waste from manufacturing everyday items such as glass, paper, motor vehicles and tins.
